

Western Australian Burden of Disease Study 2015

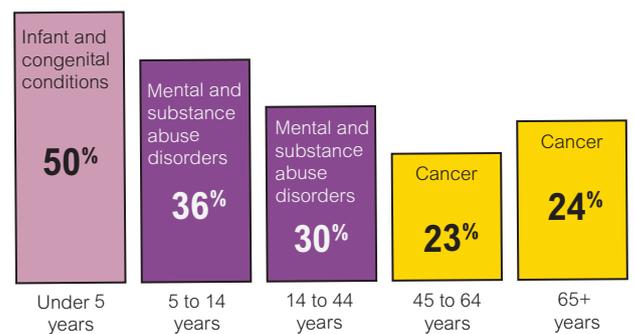

Males had a 10% greater proportion of total burden than females

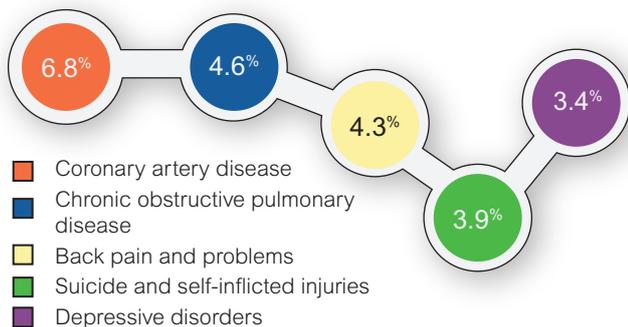

Leading 5 disease groups causing burden

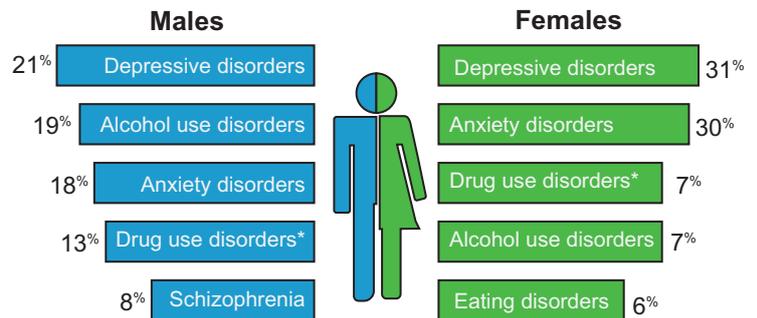

Leading disease groups causing burden across the life course (% of DALY by age group)

Of the 216 diseases, the leading 5 are (% of DALY)

Mental and substance use disorder burden

This new report draws strongly on quality local data sources including the:

- ▶ Hospital Morbidity Data Collection
- ▶ Mental Health Information System
- ▶ WA Health and Wellbeing Survey
- ▶ WA Notifiable Infectious Disease Database
- ▶ WA Cancer Registry
- ▶ Busselton Health Study

¹DALY (Disability-adjusted life years) is a measure of the overall burden of disease. It adds years of life lost (YLL) and years spent living with disability or ill-health (YLD) together
