Incident Name: Targeted Regional WA MenW Outbreak Response

Communique. 8 (covers period 27.11.2017 - 3.12.2017). **New information in bold, blue font.**

Day, date and time: Friday, 8 December 2017

This communique has been authorised by: Dr Paul Armstrong

Background

- Invasive meningococcal disease (IMD) due to meningococcal serogroup W (MenW) has risen rapidly across Australia since 2014.
- A statewide MenACWY vaccination program for 15-19 year olds commenced in April 2017 and is still continuing.
- An outbreak of MenW in central Australia started in July 2017. Aboriginal people living in communities across a broad area in the Central Australia, Barkly, and Katherine regions of the Northern Territory (NT) and the Anangu Pitjantjatjara Yankunytjatjara (APY) Lands of South Australia (SA) have been affected. **There have been two related cases reported in WA and two in Queensland.**
- Meningococcal ACWY (MenACWY) vaccination programs have been introduced in NT, the APY Lands of SA, WA and Queensland in response to this outbreak.
- **In Stage 1 of WA's response**, free MenACWY vaccination is being offered to all people aged 2 months and over living in Aboriginal communities that have strong cultural links with central Australian communities affected by the outbreak, i.e. the Ngaanyatjarra Lands and Tjuntjuntjara (Goldfields); Balgo, Bililuna, Kundat Jaru (Ringer Soak) and Mulan (Kimberley); and Punmu, Kunawarritji, Parnngurr (Cotton Creek), and Jigalong (Pilbara). The estimated target population in Stage 1 is 3,300 people and will extend from 18 October to 17 December.
- In accordance with the *Emergency Response Plan for Communicable Disease Incidents of National Significance* (CDPlan), on 2 November 2017, the Australian Chief Medical Officer declared the MenW outbreak in Indigenous people in remote Central Australian communities and other communities linked through culture and mobility a 'Communicable Disease Incident of National Significance' (CDINS).
- **Following a fatal case of MenW in an Aboriginal infant from the Goldfields in late November 2017, which brought to four the number of MenW cases in the Goldfields in 2017, 'Stage 2' of the targeted vaccination program has seen it expand to several additional towns and Aboriginal communities in the Goldfields and Midwest. In addition to the 3,300 people targeted in Stage 1, around 2,950 people are being targeted in Stage 2, which started on 28 November 2017 and will continue until 28 February 2018.**

Current situation

Cases linked to the central Australia outbreak (NT, SA, WA, Qld)

- **Total number of cases: 33**
- **Total number of deaths: Nil**

WA cases linked to the central Australia outbreak

- **Total number of cases: 2 (includes the fatal case in a Goldfields infant in November)**
- **Total number of deaths: Nil**

Other:

- **In light of a case of MenW in an infant in Cue in the Midwest, Stage 2 of the program has been expanded to include Cue and Mt Magnet, due to movement between populations and close cultural ties to current communities included in the program.**
- Information on the *Remote WA free meningococcal vaccine* webpage (http://ww2.health.wa.gov.au/Articles/N_R/Remote-WA-free-meningococcal-vaccine), including *FAQs* and *Alert for clinicians* has been updated accordingly.

Stage 1 of the targeted program: summary of MenACWY vaccine doses administered and estimated vaccination coverage (%), data extracted on 27.11.2017

	Goldfields		Kimberley		Pilbara		Total	
	2-11 months	12 months and over						
Vaccine doses administered before 16.10.2017 ¹	0	82	0	71	0	27	0	180
Vaccine doses administered, 23.10.2017 onwards	23	1,666	25	798	7	550	53	3,001
Total vaccine doses administered to date	1,771		894		584		3,234	
Total population ²	1,769		1011		714		3,494	
Estimated coverage	100%		88%		82%		93%	

Stage 2 of the targeted program - Summary of MenACWY vaccine doses administered and estimated vaccination coverage (%), data extracted on 4.12.2017

	Goldfields		Midwest		Total	
	2-11 months	12 months and over	2-11 months	12 months and over	2-11 months	12 months and over
Vaccine doses administered before 27.11.2017 ¹	638		53		673	
Vaccine doses administered, 27.11.2017 onwards	6	165	0	0	6	165
Total vaccine doses administered to date	809		53		862	
Total population to be vaccinated	2,552		349		2,901	
Estimated coverage	32%		15%		30%	

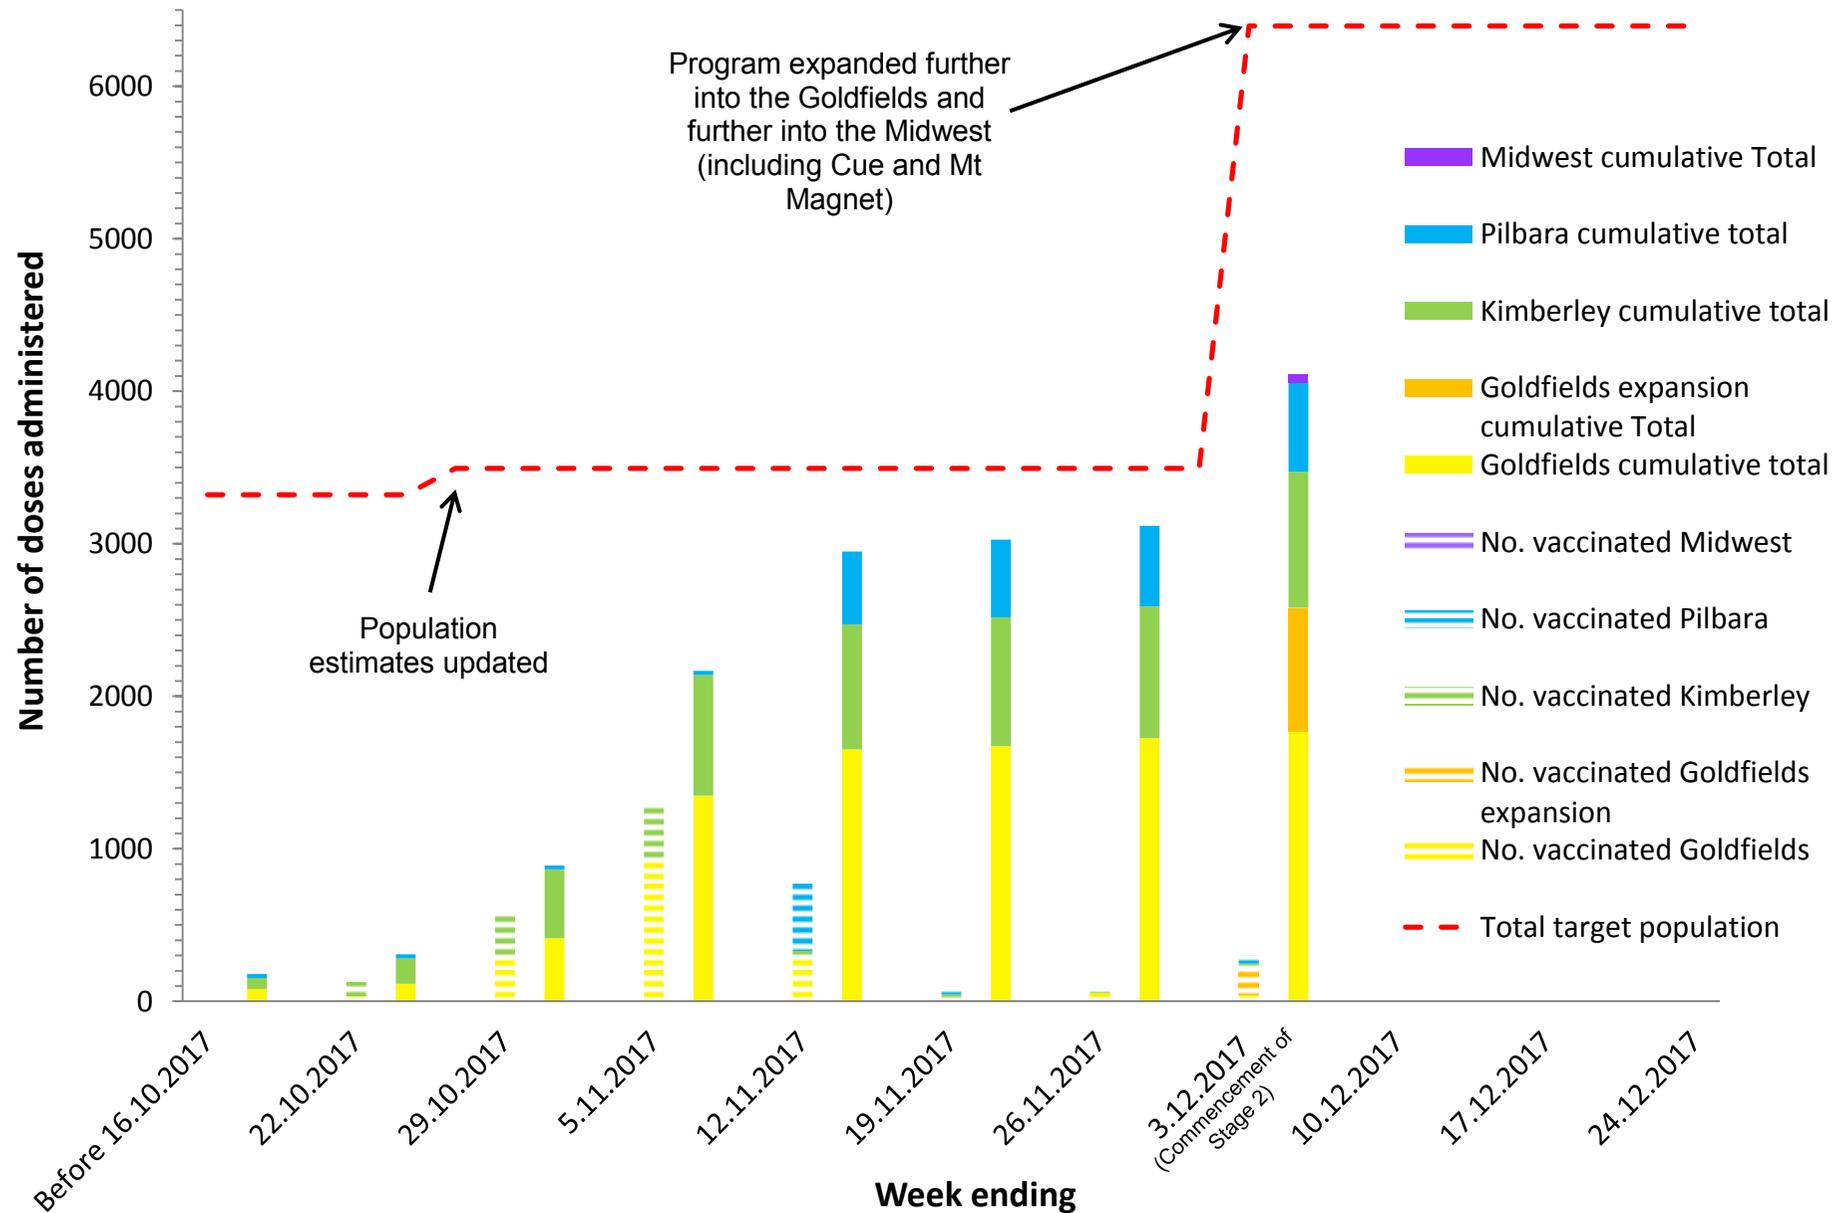

NB: Total population to be vaccinated for expansion of program is: 2 months to 19 years Aboriginal residents and 2months to 19 years non Aboriginal residents if non Aboriginal people make up less than 50% of total population of the community/town.

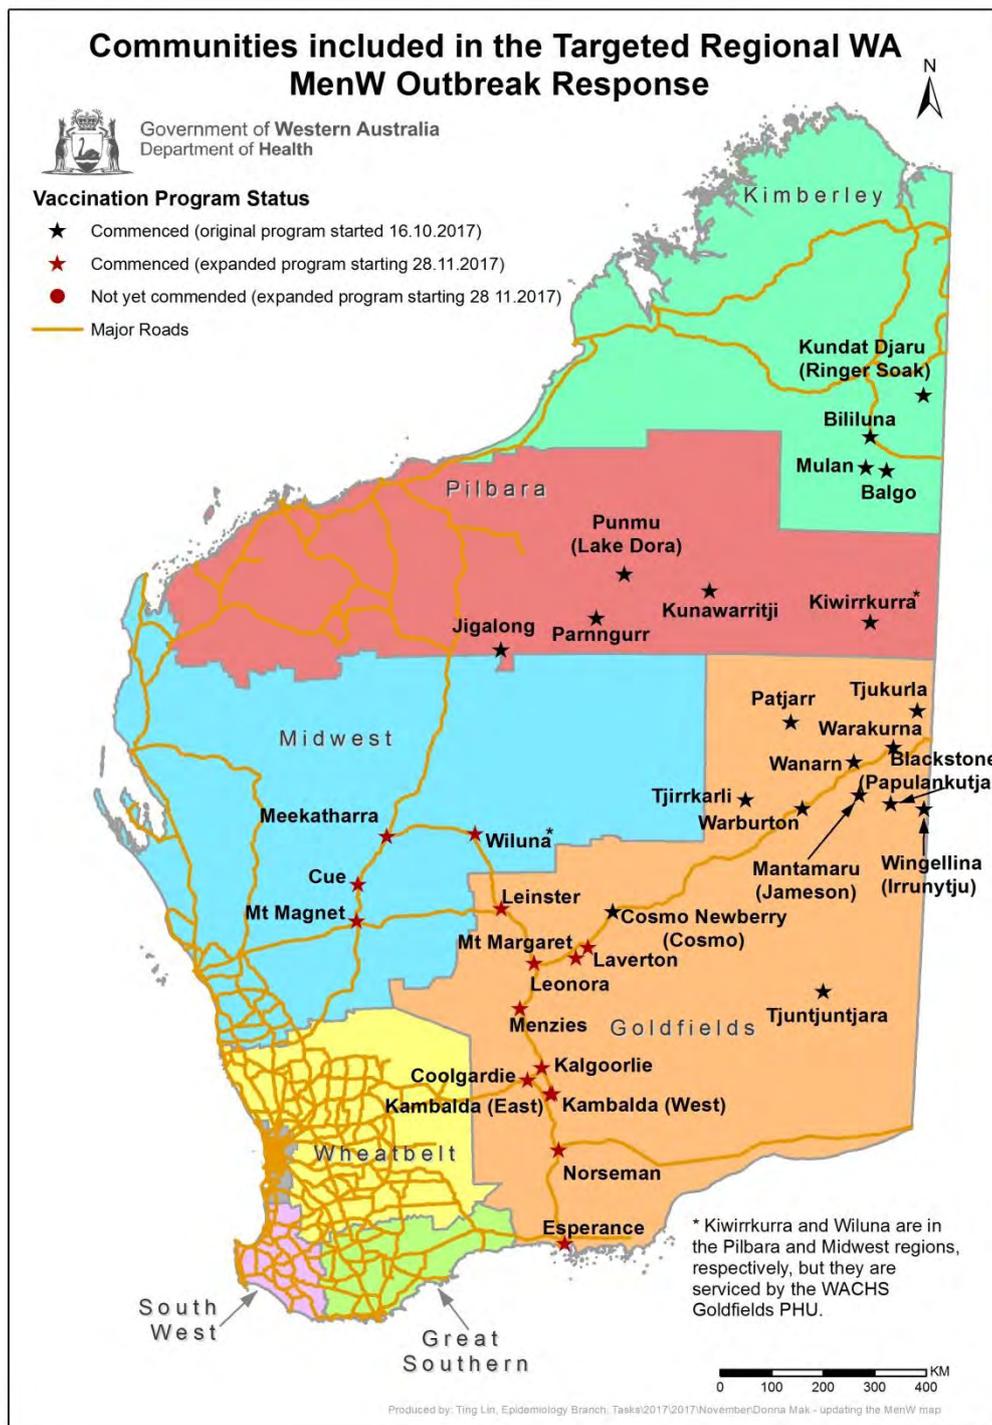

1. The majority of these figures represent those who have received vaccine as part of the state-wide MenACWY vaccination program for 15-19 year olds that commenced in April 2017.

2. Australian Bureau of Statistics (ABS) 2016 census.

Please note: Regional population estimates are based on 2016 census, however, populations will vary due to significant movement of people. Vaccination coverage should consider local population estimates at time of vaccination.

Weekly and cumulative total of number of Men ACWY vaccine doses administered, by region and week

Further communiques

- The next communique will be issued on **15.12.2017**.
